The veterinary technical devices are regulated in the Czech Republic and must be registered by the Institute for State Control of the Veterinary Biologicals and Medicines before marketing.

The veterinary technical devices are regulated and defined in the Act No. 166/1999 Coll. On Veterinary care as amended and Regulation No. 159/2021 Coll., On Veterinary non-medicinal products and veterinary technical devices.

Under this category fall e.g. materials, surgical instruments, aids, apparatuses in combination with software, intended for use in animals, for prevention, diagnosis, monitoring or treatment of injury or disability, for replacement or modification of anatomical structure, which do not have any pharmacological, immunological or metabolic effects, or device for marking of the animals (e.g. microchips).
